

Phase 2 Water Supply Improvements City of Quincy, Illinois

Upgrades to the Quincy Water Treatment Plant located at 110 North Front Street were financed by the Drinking Water State Revolving Fund (SRF). The SRF program is administered by the Illinois Environmental Protection Agency and receives a portion of its money to fund these types of projects from the U.S. Environmental Protection Agency. This project includes replacement of six (6) filters with high performance underdrains to improve the water treatment filtration process; and repairs to the masonry and concrete structures to preserve the use of the facility, which was constructed in the early 1920's. Once complete, it will improve water quality for area residents and businesses in Quincy and Adams County. SRF programs operate in each state to provide communities the resources necessary to build, maintain, and improve the infrastructure that protects one of our most valuable resources: water.
